

Next Generation Firewall

DEFENCE IN DEPTH PROTECTION LEVERAGING MARKET LEADING TECHNOLOGIES IN A SINGLE PLATFORM

The Redscan Next Generation Firewall is an integrated, simple to use, multi-vendor solution that provides multi-layered protection for network, email, web and applications.

The solution can be delivered on-premise as a physical or virtual appliance or accessed via our fully resilient and highly scalable cloud-based platform. It is fully integrated with our Security Operations Centre so that customers benefit from a solution that is fully managed and monitored by certified security experts.

KEY BENEFITS

FIREWALL PROTECTION

Powerful and flexible architecture that implements different technologies to ensure no single flaw will render a network vulnerable

VIRTUAL PRIVATE NETWORK

Support multiple protocols including IPSec, SSL, L2TP and GRE with granular access and routing control to protect traffic

ANTI-MALWARE & ANTI-SPAM

Kaspersky, Cyren and ClamAV are integrated to provide a high quality service that eliminates malware before it consumes valuable bandwidth

INTRUSION DETECTION

Combining technologies from SourceFire, Webroot & Spamhaus to identify and block malicious traffic

WEB CONTENT FILTERING

Cyren, Brightcloud and Spam Assassin are combined to protect your business from malicious IP addresses. IP reputation integrates Webroot, SURBL and Spamcop.

APPLICATION & SSL CONTROL

Fast and accurate control with the ability to rapidly add bespoke applications. SSL scanning and control is included
